- Pack Contains Individual Sections & End Pieces
- Effectively reduces vehicle speed to approximately 5mph
- Supplied with Universal Fixings suitable for Concrete and Tarmac installations
- Features a highly visible design, enhancing visibility both during the day and at night

### Product Information

Are you looking for an excellent solution to reduce any risk of collisions and calm traffic flow in working and pedestrianised areas? We have just what you are looking for with our 5 Mph Speed Bump/Ramp.

It comes as a kit that includes individual black and yellow hazard segments, 2 end pieces and Universal Fixings suitable for Concrete, Tarmac and Asphalt installations, making it a user-friendly installation process. Once you have the speed bump fixed in place it is extremely low maintenance and will require minimal up keep.

The speed ramp is made from recycled rubber which is extremely durable and built to last, it is capable of handling 60,000Kg per axle due to this it can withstand the continuous strain of large vehicles and heavy traffic.

Due to its versatile design, it can be installed end to end and provides extended coverage that can be customised to meet the specific needs of any car park or residential road, integrating seamlessly into a number of scenarios, from wide ginnels to tight country lanes.

Please note that whilst it is not a legal requirement, we would recommend that you also add signage to any road where road bumps are to be used and also advise road users of the recommended speed limit.

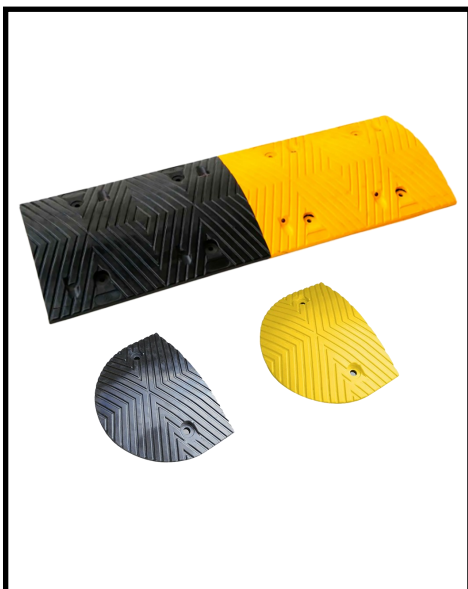

- User-friendly Installation
- Made from High Quality, Durable Materials
- Specifically Designed to Reduce Speed to 5 MPH
- Easy Customisation to Suit Various Road Layouts
