

ATUM

High expansion ratio, adhesive-lined heat-shrinkable tubing

ATUM tubing is radiation-crosslinked, heat-shrinkable, and adhesive-lined to provide environmental sealing in a wide variety of electrical applications. The product is typically used to seal connector backshells and cable breakouts and to repair damaged cable.

ATUM has an internal adhesive coating that, when heated, melts and flows to form a positive environmental seal. The coating adheres to the outer

tubing and the surface below, creating an excellent barrier to moisture penetration. The adhesive bonds to a wide variety of plastics, rubbers, and metals, including PVC, polyethylene, rubber, and aluminum.

Because the tubing and adhesive are flexible, the moisture seal withstands bending of the substrate. This flexibility makes ATUM tubing ideal for cable repair. ATUM tubing is available with expansion ratios of both 3:1 and 4:1. These high expansion ratios make it possible to repair cables without removing connectors. Just a few sizes of ATUM tubing cover a wide range of substrates. ATUM is UL-recognized at 110°C, 600 V.

Ordering information

| Colors | Standard | Black | | | | |
|----------------------|---|-------|--|--|--|--|
| | Nonstandard Clear (non-flame retardant jacket); other colors available on request. | | | | | |
| Size selection | Always order the largest size that will shrink snugly over the component being covered. Some special order sizes are available. | | | | | |
| Standard packaging | 4-foot lengths | | | | | |
| Ordering description | Specify product name, size, and color; for example, ATUM 6/2-0 (0=Black). | | | | | |
