

Carcass Tie Identification Tags

Cable tie style locking system with writeable tag area. Easy carcass identification for big game stalking and dealing.

The non-return locking mechanism ensures the tag stays firmly in place, providing a stable, flexible and fully customisable method of carcass tagging.

Applications:

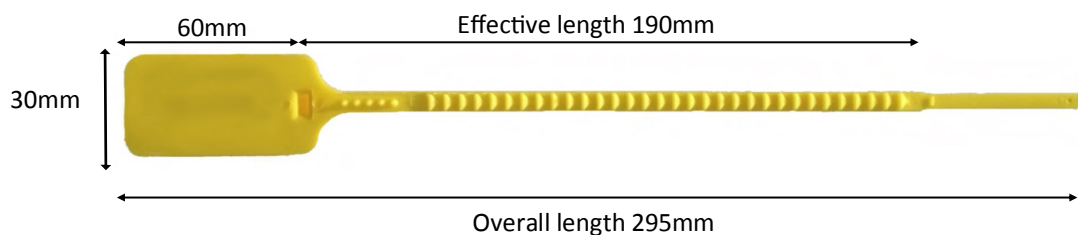

The tie is a one-piece, simple design. Simply loop the tail around and pull through the tags base as you would any cable tie. No fiddly hooks or strings to attach.

Can be marked with a permanent marker pen either prior to use or in situ. The absence of a pre-printed template provides freedom to mark up as needed.

Carcass Tags are also useful on other items such as luggage, equipment and vehicles for easy and secure identification.

Dimensions:

- Label/Tag length: 60mm
- Label/Tag Width: 30mm
- Effective Length: 190mm (60mm bundle diameter)
- Overall Length: 295mm

Available:

- Yellow / Red
